BRUSH

SELECTION GUIDE

Purchasing an inferior applicator for your project can be counter productive. Using low-quality applicators can prolong the job, cause frustration, and end up with unappealing results. Choosing the right applicator will help in being more efficient and has multiple benefits:

- Controlled even flow while painting (*will not dump the paint*)
- Consistent fine finish
- Maximum paint coverage
- Longer cut lines (*less stoppage to reload the paint brush*)
- Product durability, for many uses
- Advanced cleanability
- Overall satisfying painting experience

CHOOSING THE RIGHT BRUSH

There are a variety of brushes to choose from. Filament type, style, and handle shape will all be a factor in selecting the correct brush for your job. The next couple pages will give you a better understanding of what you need to know when selecting a paint brush.

BENEFITS OF CHOOSING QUALITY

Using a quality brush will provide you with the finest looking finish with less effort. A quality brush picks up, holds, and releases more paint at a controlled even flow, giving you a fine finish with minimal to no brush lines. When the brush picks up and releases more paint, you ultimately save time by not having to reload the paint brush as frequently.

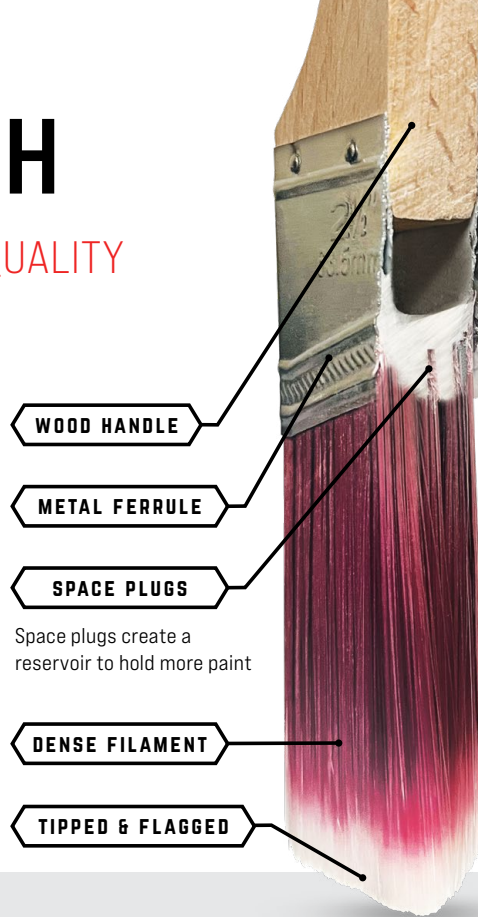

ANATOMY OF A PAINT BRUSH

CHECKING THE BRUSH FOR QUALITY

FEEL THE TIP

The filament should be soft to feel. This indicates that the filament is either flagged OR tipped. Flagging is a process done to the filament that replicates a split end from natural bristle. Tipping the filament generates a thin sharp point at the top of the filament. Both processes maximize the brushes ability to produce sharper lines when cutting in and leave a nice fine finish that has minimal brush marks. There should be a variety of different lengths of filament in the brush to optimize the amount of paint the brush will hold and release.

DENSE FILAMENT

The filament should be densely packed. If the brush filament is not dense it will be very flimsy and make it harder to control the brush while painting.

CHECK FOR SOLID FILAMENT

A good brush will have solid filament that hold their shape when bent. Hollow filaments will crimp when bent.

Natural Filament

Tipped Filament

Flag Tipped Filament

FILAMENT TYPE

NATURAL BRISTLE

Natural bristle from animals are only recommended when applying oil based paints, varnishes, shellac, polyurethane and other oil based finishes. The most popular natural bristle is hog hair. Hog bristle has natural split ends (flagging) which hold more paint and leave a nice smooth finish.

Note: Never use a natural bristle brush when using any water based application. Natural bristle absorbs water and will cause the brush to flair out, making the brush unworkable.

CHYLYN

CHYLYN filament is the most remarkable filament created to date. Infusing polyester, nylon, and our own proprietary chemical composition into every single filament. Each filament is uniquely designed with a flagged irregular tipping which provides for greater pick up and easier release of paint on any given surface. With the help of friction from the painted surface, this unique flagging of the filament ensures the brush will never loose its softness and will maintain its ultra smooth finish if taken care of properly. Above all, CHYLYN filament holds and releases more paint and the cleanability is a time-saver for today's professional painter working with low VOC paints.

NYLYN

Nylyn filament is one of a kind in the market. Infusing polyester, nylon, and our own proprietary chemical composition into every single filament. The result of this mixture is a super absorbent filament while dipping the brush and achieving maximum release while painting. The filament is tapered and flagged to produce the finest finish with virtually no brush marks. The advanced cleanability of this filament is a huge time saver. This filament is firm for best results when working with today's low VOC paints.

BLENDED NYLON / POLYESTER

In today's high quality paint brushes it is most common to see a blend of nylon and polyester filaments. These two filaments combined work efficiently with all types of water based paints. Nylon gives the brush its toughness and durability while polyester retains it's shape, is lightweight, and very easy to clean. Nylon / polyester brushes are versatile for all different types of projects and will always produce a fine paint finish. If taken care of properly, these brushes will last a long time.

POLYESTER

A brush with only polyester filament works the best with water based paints. The brush will hold its shape and stiffness at the same time provide a controlled even flow while painting.

OIL BASED

NATURAL BRISTLE OR STIFFER SYNTHETIC

Stiffer bristles are needed to push the heavy-bodied oil paint.

WATER BASED SYNTHETIC

Synthetic fibers will resist water absorption for long brush life.

SIZE + STYLE

Brushes are designed in different sizes and styles to improve efficiency and ease for the specific area you are painting.

SIZES

Pintar paint brushes are available in widths from 1in – 4in (25mm – 100mm). Painting is a very personal experience. Size selection can be based on what feels comfortable to the person using the paint brush, but a general guideline for which size brush to use is:

HANDLE STYLE

Paint brush handles come in a variety of different sizes and shapes. These are tailored for specific projects. Overall, the more detailed the job is, the thinner the handle. Although there is a general consensus, the comfort of your ideal handle style will mainly depend on personal preference and painting style.

RATTAIL

Long and skinny handle. Easiest to hold when the project demands detailed or precision work.

SASH

Most common handle found on angled paint brushes. Square with rounded corners to rest easily in a hand. Preferred choice when cutting in.

BEAVERTAIL

Mainly found on flat paint brushes. Bulged in the middle for a more comfortable feel when painting larger surfaces.

STUBBY

The shortest in length to access tight spots where longer and bulky handles would get in the way.

CHOOSING A BRUSH

ANGLED BRUSHES

Slanted edge for cutting in around windows, trim and detail work.

FLAT BRUSHES

Straight edge for larger areas like walls, ceilings, fences and decks.

1-1½ in

for detail work
& small projects

2-2½ in

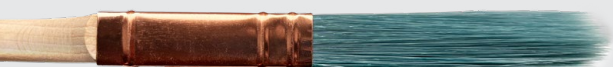

for walls, ceilings, windows,
cabinets and trim

3-4 in

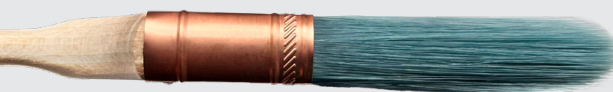

for siding, decks,
fences and masonry

STYLES

Thin Angled Sash

Angled filament and a thin ferrule for enhanced precision control. Produces a sharp, straight line for trimming in corners and edges.

Angled Sash

Angled filament and a standard ferrule to maximize paint pick up and release. Most preferred style for cutting in at the ceiling or painting trim.

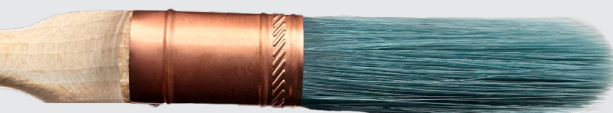

Oval Sash

Angled filament and a oval shaped ferrule to hold and release the most amount of paint. This style maximizes paint coverage for cutting in at the ceiling.

Trim

Flat filament and a standard ferrule used for painting or staining smaller flat surfaces.

Wall

Flat filament and a standard ferrule. Larger width brushes that maximize the paint/stain pick up and release for larger surface areas.

RED FROST™

NYLYN | CHYLYN

Composed of CHYLYN™ filaments, the RED FROST™ PROFESSIONAL brush is the perfect compliment for all latex or oil/alkyd paints and stains. CHYLYN™ is a unique tapered, modified, synthetic filament with a flagged irregular surface that provides a far-superior performance than conventional filament blends. The filaments stay stiffer longer, while holding and retaining a better shape. Above all, RED FROST™ holds and releases more paint and the cleanability is a time-saver for today's professional painter. Available in an oval design for enhanced paint pick up.

NYLYN™ TECHNOLOGY

NYLYN

NYLYN™ filaments are made with a unique proprietary blend of ingredients which provide superior paint pick-up and release, allowing you to finish paint projects faster. Tested using professional standards, each brush is hand crafted to provide the best precision trim. NYLYN™ has excellent performance in high heat and humidity and offers better levelling with today's heavy-bodied, fast drying, low VOC paints. Available in an oval design for enhanced paint pick up.
